                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A targeting agent for improving the delivery of drugs to target cells, carioularly for delivery of enzymes, binding agents, inhibitors, nucleic acids, carbohydrates and lipids, is new. The targeting agent comprises a colypoptide which forms a closed covalent loop and contains at least three peptide domains having beta-sheet character, each of the domains three peptide domains lacking beta-sheet character. The targeting condecule preferably comprises all or a portion of a mative J chain can bentameric IgM or dimeric IgA. The polypeptide is linked connomers to form pentameric IgM or dimeric IgA. The polypeptide is linked connomers to biological agent which is capable of entering and killing can non-polarised epithelial cell. The targeting molecule may be linked to the biological agent by a substrate for an intracellular or extracellular contracting and which is associated with or secreted by the non-polarised target cell. The targeting molecule can be used in a pharmaceutical composition for treating a patient afflicted with a disease associated with non-contracting and explain a cells, especially cancer e.g non-small cell lung carcinoma, breast carcinoma, colon carcinoma, ovarian carcinoma, prostate carcinoma, and endometriosis, viral infection or inflammatory disorders. This peptide is an endomembrane retention signal which can be attached to the carboxy terminal end of the targeting molecules described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The specification describes a process for multimerising chimeric proteins in cells. The method comprises forming a complex between a rapamycin compound and cells containing at least one recombinant nucleic acid (INA) construct encoding specialised chimeric proteins (CPs). The method is used for multimerising chimeric proteins in cells, which is useful for gene therapy, activating the transcription of a desired gene, accutating cell growth, proliferation, differentiation or apoptosis, or triggering other biological events in engineered cells in a rapalog-dependent manner. The present sequence can be included in the chimeric proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Drug-induced growth; cell proliferation; cell differentiation; leukemia; signalling domain; drug-binding domain; hemopoietic disease; leukopenia; neurodegenerative disease; thrombocytopenia; beta-thalassemia; sickle cell anemia; Fanconi anemia; myelodysplastic syndrome; chronic granulomatous disease; leukocyte adhesion deficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                    Multimerizing chimeric proteins in cells useful in gene therapy, for e.g. target gene transcription and growth of engineered cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for rendering a subpopulation of mammalian cells susceptible to drug-induced growth, proliferation or differentiation. The method comprises transducing one or more cells of a population of primary mammalian cells with at least one recombinant DNA construct encoding a fusion protein. The fusion protein comprises at least one signalling domain and at least one drug-inding domain which is therefologous with respect to the signaling domain and at least one drug-inding domain which is cherefologous with respect to the signaling domain and binds to a selected drug. Exposure of the transduced cells to the drug induces growth, constitution or differentiation of the cells. The methods are useful for treating a hemopoietic disease or pathological condition, or neurodegenerative disease in a mammal. In particular, the methods are used for rendering a subpopulation of human embryonic stem cells susceptible to drug-induced growth, proliferation or differentiation. The methods are also useful for administering hemopoietic stem cell therapy to a mammal. Hemopoietic diseases suitable for treatment include thromobosytopenia, leukopenia, leukopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                  A method to positively select engineered cells and controlling cell differentiation and growth, useful for expanding subpopulations of cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                leukemia, beta-thalassemia, sickle cell anemia, Fanconi anemia, aplastic anemia, myelodysplastic syndrome, chronic granulomatous disease and leukocyte adhesion deficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    doxorubicin, genistein, an antisense molecule, ribozymes or any other pharmacological agent to specifically target target cells over expressing ILI3 receptors. The targeting ligands have increased specificity for cancer cells as compared to normal cells and are therefore very effective for specifically delivering effector molecules to various neoplasias. The present sequence is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes targeting ligands which are mutagenized IL13 (interleukin 13) molecules having one or more mutations in the domain that interacts with the hIL14 receptor subunit designated the 140
                                                                                                                                                                                                                                      New mutagenized interleukin 13 molecules for delivery of cytotoxins to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antibody; immune response; modulation; MHC; IRM; receptor; intrabody; major histocompatibility complex; graft rejection; immunomodulatory response molecule; regulation; transplantation; retention signal; localisation signal; golgi apparatus; ER; endoplasmic reticulum.

Claim 13; Page 64; 92pp; English

```
Intracellular binding to a desired target by an intracellularly expressed antibody (i.e. an intrabody) can be used to knock out multiple locuses of antibody (i.e. an intrabody) can be used to knock out multiple locuses of immunomodulatory receptor molecules (IRMB), so that the expression of multiple major histocompatibility (MHC) molecules is blocked. This selective targeting of IRMS, their pathways or components, can be used to selectively regulate the immune system by controlling expression of these component of the MHC pathway or the MHC assembly line or antigen component of the MHC pathway or the MHC assembly line or antigen component of the MHC pathway or the MHC assembly line or antigen or presentation can be targeted. Intrabodies can be used to knock out the commune response in a particular tissue or portion of the body to prepare it for cell or tissue transplantation. Alternatively, an organ for transplantation can be perfused with the intrabody ex vivo. The cannershalms and chabodies, heavy chains, Pab' fragments, single-chain antibodies and diabodies. The intrabodies also comprise and intracellular localisation signal to facilitate interception of expressed intrabodies can example, if the target was a cell surface receptor; the antibody would comprise, if the target was a cell surface receptor; the cantibody would comprise a leader sequence and an endoplasmic reticulum certain pagnal the localisation sequence. For other localisation sequences see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antibody production; non-native epitope; immune response; antigen; cancer; parasite; cell binding domain; domain Ia; humoral; cell-mediated; secretory; ER; endoplasmic reticulum; retention sequence.

New Pseudomonas exotoxin chimeric immunogens - comprise a non-native epitope for producing an immune response to pathogens, e.g. virus,

```
This invention describes a non-toxic Pseudomonas exotoxin A-like (PE-CC like) chimeric immunogen. This PE-like immunogen can be used in vaccines and for producing antibodies against the non-native epitope. It can be used for producing an immune response to a pathogen, e.g. a virus.

CC used for producing an immune response to a pathogen, e.g. a virus.

CC also be isolated and used for e.g. affinity chromatography. The PE community of the producing can be maded by wholly recombinant echniques which allows insertion of existing variants of an epitope, or new variants of rapidly consistent the production of its convolving epitopes. The PE can be engineered to alter the function of its convolving epitopes. The PE can be engineered to alter the function of its continue cell binding domain of PE A (domain Ia) with a ligand for a particular cell receptor, the chimera can be targeted to bind to the particular cell type. The immunogens can elicit humoral, cell-mediated condines and secretory immune responses against the non-native epitope. This commain motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New C3 substituted rapamycin derivatives acting as dimerization agents for chimeric proteins, used to trigger biological responses, e.g. growth or proliferation, in transformed cells - have minimal immunosuppressant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes rapamycin derivatives (I) containing the basic substructure and optionally having one or more substituents and unsaturations (between carbons I and 8), as pure stereoisomers or their

This invention describes novel aggregate molecules (AgM) comprising an adhesive molecule attached to a desired product molecule. The products of the invention are used in a method to aggregate a desired product molecule in a lipid bilayer and comprises forming oligomers between two or more aggregate molecules that are physically associate with a lipid bilayer, where the aggregate molecules are accumulated in association with the lipid bilayer, where the aggregate molecules comprise a betalinked to the adhesive molecule and the desired product molecule is linked to the adhesive molecule and the desired product molecule is can be applied to production of a therapeutic composition. The sequestration acts to protect the integrity of a product molecule, as well as to facilitate recovery of the molecule. AAY25688*Y25694 represent membranes of cells biosynthetic production of molecules. mixtures and derivatives. (I) are used to dimerise/multimerise chimeric proteins that contain domains of the FK506-binding protein, FKBP, and an FRB domain (from human FRAP protein), so can be used as switches to trigger selected biological responses, e.g. growth, proliferation, differentiation, apoptosis and gene transcription, particularly in conjunction with gene therapy, but also for controlling production or recombinant proteins and viruses and generally in biological research.
(I) have much lower immunosuppressive activity than known rapamycins, e.g. 200 times lower, so are safer to use. The present sequence represents an amino acid sequence which targets proteins bearing them to the endoplasmic reticulum (ER), given in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protective

```
The present sequence represents a protein localisation signal sequence.

The peptide can be used in the method of the invention. The invention calates to the production of transgenic plants that express a protein able to produce hydrogen peroxide. The production method comprises transforming a plant cell with Agrobacterium rhizogenes containing a vector that carries a gene encoding the protein to be expressed in the transforming a plant, selection is made for the expression of the gene in a colorimetric test using peroxidase. Plants are transformed to produce a protein of interest, specifically oxalate oxidase (OO): (i) to impart or protein of interest, specifically oxalate oxidase (OO): (i) to impart the pathogens (OO degrades oxalic acid, a phytocoxin produced by many phytopathogens); or (ii) as a selection system for plants cransformed with a second gene, encoding another protein of interest interest. Particularly the second protein confers resistance to pathogens (Continase. The method uses a simple and rapid method, based on a colorimetric test, to select for transformation, particularly using as test sample roots induced by Agrobacterium rhizogenes. It is not necessary that the cells being treated should survive the test, so high concentrations of substrate can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The patent discloses four forms of human attractin polypeptides which cenhance immune response by promoting macrophage and monocyte spreading in cenhance immune response by promoting macrophage and monocyte spreading in the presence of T cells. These include soluble attractin-1 and -2 and community and -2. These various forms of attractin are encoded to alternatively spliced mRNA molecule transcribed from a single gene. The present sequence is a retention signal for endoplasmic reticulum (ER) which can be used to direct attractin to a specified intracellular concimunosuppressed patients such as those undergoing chemo- and radio- immunosuppressed patients such as those undergoing chemo- and radio- therapy treatment for cancer or those suffering from common variable confinuncéaticiency syndrome. The protein may also be used to regulate immune reactions. Attractin antibodies can be used to inhibit immune response in transplant recipients or patients afflicted inhibit immune response.
                                                                             Attractin; immune response; macrophage; monocyte; T cell; cancer; rat; immunostimulant; immunosuppressed patient; immunodeficiency syndrome; ER; transplant; autoimmune disease; endoplasmic reticulum retention signal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acids encoding human attractin polypeptides useful for enhancing immune responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ER; polypeptide vector; endoplasmic reticulum; retention signal; protease; drug delivery; immune system; glycosylation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Endoplasmic reticulum (ER) retrieval signal sequence.
                                      endoplasmic reticulum retention signal peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a peptide which forms a targeting domain. The peptide can be used to internalise sequences, such as MUC-1 antagonists, within the cell. MUC-1 is a immunosuppressor, and antagonists act to reduce overactive immune responses. Thus, the peptide can be used to reat inflammatory disorders such as rheumatoid arthritis, psoriasis, allergic contact dermatitis and ankylosing spondylitis, uncoimmune classification including myasthenia gravis, systemic lupus erythematosus, polyarteritis nodosa, Goodpastures syndrome, isopathic thrombocytopoenic purpura, autroimmune haemolytic anaemia, Graves' disease, rheumatic fever, pernicious anaemia, insulin-resistant diabetes mellitus, bullous pemphigoid, pemphigus vulgaris, viral myocarditis, autoimmune pernors disease, rhyroiditis, male infertility, arcoidosis, allergic encephalomyelitis, thyroiditis, male infertility, arcoidosis, allergic encephalomyelitis, sympathetic ophthalmia and primary biliary cirrhosis, immune disorders, graft versus host disease and transplant rejection

                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                  The invention provides a polypeptide vector, no longer than 69 amino acids in length that comprises a helix-loop-helix motif, an endoplasmic reticulum (RR) retention signal (either KDEL and/or RDEL) a protease recognition sequence subtended by a disulfide bond and glycosylation site(s). The vector may be used for delivery of drugs and epitopes to the immune system. The vector is small in size, rigid in structure and can be modified to optimize it's efficacy of delivery. There is no need for adjuvants or the need to recruit circulating cells from the immune system to any specific site as the construct will target cells of the immune system through the carbohydrate structure in the glycosylation motif. The vector does not have any specific cytotoxic effects as it has no cytotoxic enzyme activity. The present sequence represents a ER retrieval signal used in the vector of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          eticulum; retention signal; monocotyledonous plant; monocot; transgenic plant; mammalian polypeptide; antibody;

This sequence represents an endoplasmic reticulum (ER) retention signal. Levels of mammalian polypeptide expression in transgenic monocotyledonous plants can be enhanced by use of this signal. The fivention provides rice, wheat and other monocot plants that have been transformed with expression cassettes for production of mammalian polypeptides, such as entibodies. ER retention signals (see also AAY32396), 5' untranslated regions and leader peptides are employed in various combinations to provide high expression yield. Plant cell or seed containing polypeptides selected from FV, Fab, F(ab)2, diabody, dimeric scFV, whole antibody and four-chain secretory antibody are claimed. Multi-chain complexes such as four-chain secretory antibodies are produced by expression of component polypeptides from separate vectors, all introduced into the same cell by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a biological tissue comprising endothelial cells which can be induced to generate a compound which downregulates the expression of a cell adhesion molecule. The invention also encompasses a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Biological tissue for combating cellular phase of rejection process resulting from xenotransplantation comprises endothelial cells which may be induced to generate compound which down-regulates expression of cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ER localisation signal; endoplasmic reticulum; subcellular targetting; mutine; porcine VCAM specific single chain antibody; sFv; human; vascular cell adhesion molecule; transgenic animal; organ transplantation; xenotransplantation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

potypeptide comprising a region capable of this mucleotide sequence conding the polypeptide, and vectors and cells comprising the nucleotide encoding the polypeptide, and vectors and cells comprising the nucleotide encoding the polypeptide, and vectors and cells comprising the biological invention also relates to animals comprising the biological tissue of the invention and method of rendering a tissue or organ suitable for transplantation by expressing the cell adhesion molecule-binding polypeptide in endothelial cells in the tissue or organ. The cell adhesion molecule-binding polypeptide sequesters the cell adhesion concerning the targetting of the transplanted biological tissue by preventing the targetting of the transplantation process. The biological tissue and methods are useful for combaining the cellular phase of the compromising the immune system of the recipient of the grafted tissue. In the exemplifications of the invention, a single chain antibody (8FV) compromising the immune system of the recipient of the grafted tissue. In the exemplifications of the invention, a single chain antibody (8FV) comprising human VH segments is generated. The sFV is specific for contains an endoplasmic reticulum (ER) targetting eduence (KDEL); is AAB01395). When the sFV is expressed in porcine endothelial cells, it is contains an endoplasmic reticulum cell surface VCAM levels. The sequence from mouse which was incorpoarted into the porcine VCAM-specific sequence from mouse which was incorpoarted into the porcine VCAM-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Targetted gene delivery; fibroblast growth factor receptor; FGFR-binding protein; nucleic acid binding protein; receptor-internalised ligand; cytotoxin; saporin; gene therapy; cytocide; antiproliferative; cancer; melanoma; diabetic retinopathy; retemenatoid arthritis; restenosis, Duputren's contracture; psoriasis; eczema; nuclear translocation signal; NTS; cytoplasmic translocation signal; endosome-disruptive peptide.

The invention relates to a novel gene delivery composition for the cargetted delivery of cytotoxins or prodrug-converting enzymes to targetted delivery of cytotoxins or prodrug-converting enzymes to proliferating cells. The gene delivery composition comprises a protein chantomatic domain is complexed with a suitable expression construct encoding a cytotoxin such as saporin. One more linkers may join the FGFR binding protein to the nucleic acid binding protein. These are selected to increase the specificity, toxicity, solubility, serum stability or increase the specificity, toxicity, solubility, serum stability or uncleic acids for delivery to a cell. The fusion protein binds to FGFR and is internalised by cells that carry this receptor. The gene delivery composition is used for the therapeutic alteration of the function, gene expression and viability of cells. In particular, it may be used for the treatment and prevention of cell proliferative disorders, for example carbor reservant and many other sorts of cancer, rheumatoid arburitis, restenosis, bupuytren's contracture, diabetic retinopathy.

Compositionis and eczema. The gene delivery compositions of the invention of services in the paper of cancer, rheumatoid arburitis, restenosis, bupuytren's contracture, diabetic retinopathy.

Compositions, and ANYO9445-Y90444 represent cytoplasmic translocation compositions are methode. Sequences AAXYO9441.

Compositions, and ANYO9445-Y90444 represent Cytoplasmic translocation signals. Sequences AAXYO9447-Y0044 are endosome-disruptive peptides.

Composition and prevention of cells inher peptides.

Composition and viability of particular cells and can delivery of sequences AAXYO9447-Y0044 represent Cytoplasmic translocation signals. Sequences AAXYO9447 being contractine for certain enzymen, AAYO945 are endosome-disruptive are necessarian entymen. AAYO945 and endode flexible linkers that are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

carboxy terminal of polypeptides trageted to the ER in Aspergillus niger. AAY92047 is a novel ER signal sequence found at the C-terminal end of CYPB, a cyclophilin-like peptidyl prolyl cis-trans isomerase, also from A. niger. CYPB is capable of catalyzing the cis-trans isomerization of a peptide bond on the N-terminal side of proline residues in polypeptides. CYPB are useful in methods for increasing the yield of secreted polypeptides from cells. The secreted polypeptides may be enzymes (such as chymosin, thaumatin or alpha-galactosidase) that can be used in food processing, a peet toxin, adenosine diphosphate (ADP)-glucose pyrophorylase, a glucanase or beta-1,4-endoglucanase
                                                                                                                                                                                                                                                                                                                                                    AAY92045-46 are endoplasmic retention (ER) signal sequences found at the
                                                                                                                                                                                                                                         New peptidyl prolyl cis-trans isomerase, designated CYPB, from Aspergillus niger, useful in methods for increasing the yield of spolypeptides, such as enzymes used in food processing, from cells.
                                                                                                                                                                                                                                                                                                                  Claim 8; Page 34; 52pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          contraction relaters to a novel device for promoting neutronal neutronal growth, comprising a gene-activated matrix (GAM). The GAM comprises a biocompatible matrix, and at least one matrix (GAM). The GAM comprises a biocompatible matrix, and at least one DNA and an inconsilently associated with the matrix. The DNA is non-covalently associated with the matrix. The promoter. The DNA is non-covalently associated with the matrix. The computer comprise a targetting agent, which is complexed with or compared to DNA encoding a neuronal therapeutic agent, and which is conjugated to DNA encoding a neuronal therapeutic or a neuronal or a repair cell. This targetting agent may also comprise a linker providing a nuclear or cytoplasmic translocation signal sequence. The invention also encompasses methods of preparing a GAM for promoting neuronal regeneration and suchods of preparing a GAM for promoting neuronal regeneration and so survival. The neuronal therapeutic agent encoded by the GAM DNA is capable of inducing neuronal axonal generation or regeneration, and may include neurotrophic factors which are members of either the neurotrophin or a guidance factor which promotes defined nerve growth. The device can be used to transfer the neuronal therapeutic-encoding DNA into a matrix to a mammalian repair of into a neuronal cell or repair cell. The device promotes axonal entrapment. The device of the invention are useful for treatment of neurodegeneration devices of the invention are useful for treatment of neurodegeneration of the wound healing process offers a number of devices of the invention of the wound healing process offers a number of advanceses such as Alzheimer's disease, Parkinson's disease or Huntington's disease. Piretly, the ease of producing and purifying matrices can act as structural scaffolds that promote cell ingrowth and proliferation. Thirdly, direct gene transfer may be an advancedes. Piretly blasmid DNA in a device of producing or for receptors which mand properly processing or for receptors which mand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                           A gene-activated matrix device comprising a neuronal therapeutic encoding agent is capable of inducing neuronal axonal generation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cyclophilin-like peptidyl prolyl cis-trans isomerase; food processing;

                                                                                                                                                          g
                                                                                                                                 ò
                                                                                                                                                                                                                                                          ö
                                                                         The specification describes a plant expression vector which comprises two expression cassettes, the first comprising a polymucleotide encoding an antigen and the second comprising a non-identical polymucleotide encoding the same antigen. The antigen is especially a hepatitis B surface antigen (HBBAg). The expression vector is used to transform bacterial and plant caells to elicit the production of anti-hepatitis B antibodies and are useful as vaccines. The present sequence represents a microsomal retention signal, which is used in the course of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention is concerned with a method, designated immunological mass fingerprinting, which enables the identification of peptide epitopes that activate CD4+ T-cells. Peptides of this kind are also given. CD4+ cells are involved in the pathogenesis of disease, and the peptides can be used in the prevention and treatment of autoimmune diseases such as diabetes, multiple sclerosis, rheumatoid arthritis, myasthenia gravis, systemic lupus erythematosus, autoimmune premature ovarian failure, Graves' thyroiditis, Hashimoto's thyroiditis, primary hypothyroidism, coeliac disease, primary biliary cirrhosis, autoimmune hepatitis, Addison's disease, vitiligo, systemic sclerosis and anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying a class II major histocomatibility complex-binding fragment of a polypeptide useful for diagnosing and protecting against diabetes comprises contacting a ligand, a polypeptide and a mammalian antigen

This involves expressing a library of retroviral vectors encoding randomised candidate peptides in cells and screening for those peptides which cause a multi drug resistant phenotype. This method is particularly useful in identifying treatments for multi-drug resistant cancer. (Updated on 11-SEP-2003 to standardise

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The specification describes polypeptide, designated hB7-H2. The hB7-H2 polypeptide co-stimulates T cells. The hB7-H2 proteins and its variants are generally useful as immune response-stimulating therapeutics. For example, the polypeptides can be used for treatment of disease conditions complex, other virally or environmentally-induced conditions, and certain complex, other virally or environmentally-induced conditions, and certain complex, other immune deficiencies. They may also be employed to increase immunosuppressive drugs such as certain chemotherapeutic agents, and therefore are particularly useful when given in conjunction with such therefore are particularly useful when given in conjunction with such cused to treat conditions involving cellular immune responses, e.g., inflammatory conditions (such as, for example, those induced by cinflammatory conditions (such as, for example, those induced by confortions (such as, for example, those induced by confortions (such as, for example, those involved in autonimmune diseases (e.g. rheumatoid arthritis), multiple sclerosis, or insulin-dependent diabetes melliture). AAG67288-91 can be used to direct compartments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                   An isolated DNA encoding a hB7-H2 polypeptide, useful for treating cancer, AIDS, or autoimmune diseases (e.g. rheumatoid arthritis, multiple sclerosis or insulin-dependent diabetes mellitus).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

```
The sequence relates to the amino acid sequence of an ER lumen retention signal fused to ricin A chain in order to enhance its toxicity. The invention relates to a novel toxin (e.g., ricin) based antiviral agent which is toxic to virus-infected cells, but non-toxic to uninfected cells. The invention has anti-HV and viruside activities. Its mechanism of action is through inactivation of cellular ribosomes and enhancement of binding of the antiviral agent to galactose residues on cell surfaces, and its cellular internalisation. The invention is useful for treating thuman immunodeficiency virus infection and other viral infections, cepecially retroviral infections. The antiviral agent is activated in viral particles or early-stage infected cells, killing the cells upon infection and effectively preventing the integration of the viral genome thereby preventing the latency/rebound problem. The agent enters all HIV susceptible cells, and not just cells known to act as host cells for the virus. The antiviral agent remains inert in a cell cutil degraded in it, unless the cell is infected with the virus, where the viral protease activates it. (Updated on 11-SEP-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel composition comprising toxin e.g., ricin based antiviral compound useful for treating viral infections such as human immunodeficiency virus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                              This invention describes novel in vitro screening methods (1) for a transdominant intracellular bioactive agent capable of altering the phenotype of a cell. (1) comprises: (a) introducing a molecular library of randomized candidate nucleic acids into several cells; and (b) correctly the cells for a cell exhibiting an altered phenotype, where the altered phenotype is due to the presence of a transdominant bioactive agent. The methods are particularly useful for screening intracellular transdominant effector peptides and RNA molecules selected inside living cells from randomized pools. (1) is also useful for introducing random ibraries into cells to screen for bioactive compounds. The methods allow compounds and highly efficient screening of large numbers of random colls on their corresponding expression products in a single stop. In addition, the methods allow screening in the absence of significant prior characterization of the cellular defect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                Methods for screening intracellular transdominant effector peptides and RNA molecules comprise delivering random oligonucleotides to cells, which are then screened for an altered phenotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Epitope; tumour antigen; antiviral; immunostimulatory; cervical cancer; human papillomavirus-associated disease; condyloma; cervical dysplasia; cervical dysplasia; major histocompatibility complex; MHC I.

This invention relates to polynucleotides encoding a hybrid polypeptide CC comprising a signal sequence and three segments that are either contiguous or separated by a spacer amino acid or spacer peptide. The contiguous or separated by a spacer amino acid or spacer peptide. The contiguous or separated by a spacer amino acid or spacer peptide. The control or specifically details polynucleotides encoding a polypepticpe peptide segments are tumour antigens or a naturally cecurring protein of a pathogenic agent. The polymucleotide and aminomatimulatory activity. The polynucleotide and immunostimulatory activity. The polynucleotide in a mammal. The polynucleotide and protein are useful as vaccines for treating tumours and pathogenic infections. The polynucleotide is also useful for preventing or treating human papillomavirus (HPV) associated diseases, particularly exophytic condyloma, flat condyloma, cervical diseases, particularly exophytic condyloma, flat condyloma, cervical cinfection, cervical dysplasia, high grade squamous intraepithalial esions, and anal HPV infection. The polynucleotide and polypeptide are response against pathogens, tumours or autominated alseases in a controls in T cell stimulation assays in vitro, and as tools to controls in T cell stimulation assays in vitro, and as tools to controls in T cell stimulation assays in vitro, and as tools to complex I (MMC I) associated tumour and pathogen antigens. The peptides AABS6037 and AABS6034 - AABS6037 and AABS6044 - AABS6040 proteins of the polypitope proteins of the invention. Also can be used as part of the polypettope proteins of the invention. Also and ladded are examples of the polypettope proteins represented by AABS6030 and London and pathogen antigens. The peptides AABS6034 and London and pathogen antigens. The peptides AABS6034 and London and pathogen antigens and polypetides.

Can be used as part of the polypettope proteins represented by AABS6030 and London and pathogen antigens. The peptides AABS6034 and London and pathogen antigens and 
                                                                                                                                                                                                                                                                                                                                                                                                          Novel nucleic acids encoding polyepitope polypeptides containing multiple epitopes from one or more proteins, useful for treating tumors and as vaccines against pathogenic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cell membrane transport; compartment transport; transport protein; membrane-specific transport; gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          compartment. Or membrane specific transport, compartment or membrane a cell, compartment or membrane a cell, compartment or membrane a cell, compartment or membrane a cell mediator for the cell membrane a cell, compartment or membrane compartment of the cell membrane a cell, compartment or membrane compartment of the cell method also describes the preparation of [I] which transported. The method also describes the preparation of [I] which comprises (a) separate peptide synthesis of the transport protein, and optionally a spacer (preferably by Merrifield synthesis); (b) covalent coupling of the address protein to an active agent, optionally via a spacer; and (c) redox coupling of the product of separate product is purified, especially by high performance liquid chromatography (HPLC). The products of the invention can be used for cell chromatography (HPLC). The products of the invention can be used for cell chromatography of the products of the invention can be used for cell agnosis and/or thraspy. (I) is useful in gene therapy, where a whole gene (including the regulatory elements) can be transported. Targeting using (I) is widely applicable and highly effective. (I) have low immunogenicity, minimal risk of infection and a long duration of action. The specific transportation of the active agent to the required cell compartment gives improved diagnostic or therapeutic results, including creduced side-effects, in human or veterinary medicine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The present sequence is that of an endoplasmic reticulum retention peptide. Claimed methods of the invention involve the administration to a mammal, such as a human, of a nucleic acid encoding a polypeptide comprising a first peptide, which controls intracellular trafficking, e.g. the present sequence, and a second peptide, which is derived from human papilloma virus type 16 B7 protein and which contains multiple overlapping class I HIA-binding T-cell epitopes. The immunogenic peptides and nucleic acids of the invention are used as vaccines prophylactically or therapeutically in subjects having, suspected of having, or at risk of exception, condyloma, flat condyloma, cervical cancer, respiratory pepilloma, conjunctival papilloma, genital-tract HPV infection and cervical dysplasia (claimed)
                                                                                                                                              Inducing an immune response in a mammal for prophylaxis and treatment of human papilloma virus infections such as cervical cancer, comprises administering immunogenic peptides from the papilloma virus type 16 E7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Protein production; food processing; protein antibiotic; feed enzyme; endoplasmic reticulum retaining peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Expressing and isolating recombinant protein in a plant, useful for producing large quantities of recombinant proteins, by expressing a fusion protein including a cellulose binding peptide fused to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amino acid sequence of an endoplasmic reticulum retaining peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

The specification describes a method for expressing and isolating a recombinant protein in a plant. The method comprising expressing a fusion protein including the recombinant protein and a cellulose binding peptide fused to it, where the fusion protein is compartmentalises binding peptide sequestered within plant cells, plant derived tissue or cultured plant cells. The method is useful for obtaining large quantities of the ceombinant proteins and protein products in a simple and cost-effective manner. Recombinant proteins may be used commercially, such as in the food processing industry, e.g. glucoamylases and glucose isomerases are to used for converting starch to high fructose corn syrub, proteinses for the hydrolysis of high molecular weight proteins and in manufacturing leather or alcoholic beverages, pectinesterases for pectin hydrolysis in food industry, lipases for cleaving ester linkage in triglycerides, and for for effluent treatment. The recombinant proteins may further be used to produce protein antibiotics, which can be used in healing processes, and to produce animal feed enzymes. The present sequence represents an endoplasmic retaining peptide, which is used to produce the
                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The present sequence represents the peptide retention signal for the endoplasmic reticulum (ER). The present sequence is described relating to the invention of novel human and mouse immunoregulatory protein B7-H1 (AAU03559, AAU03560). B7-H1 is useful for co-stimulating T-cells such as

Novel DNA encoding immunoregulatory molecule B7-H1, is useful for costimulating a T cell for augmenting immunoregulation and for controlling pathologic cell mediated conditions.

```
cc helper T-cells that provide helper activity for B-cell antibody-producing response e.g. IgG2a antibody response, in a mammal having an response e.g. IgG2a antibody response, in a mammal having an immunodeficiency disease, inflammatory condition or an autoimmune addisease, by culturing B7-H1 with the mammalian T-cells in vitro, or administering B7-H1 or a nucleic acid encoding B7-H1 to the T-cells, such that the level of CD40 ligand on the T-cell evil of the T-cells is increased. The method further involves providing a recombinant cell e.g. an antigen or presenting cell (APC) which is the progeny of a cell obtained from the presenting cell (APC) which is the progeny of a cell obtained from the mammal and has been transfected or transformed ex vivo with a nucleic cell encoding B7-H1, so that the cell expresses B7-H1, and administering the cell to the mammal. Prior to administration, the APC is pulsed with an antigen or an antigenic peptide. B7-H1 can be used to control an antigenic peptide. B7-H1 can be used to control agents such as Mycobacterium tuberculosis) or other pathologic cell mediated conditions (e.g. those induced by infectious capents such as Mycobacterium tuberculosis) or other pathologic cell mediated services involved in autoimmune diseases (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes a method for inhibiting, diminishing, preventing or treating surface receptor-dependent infection of cells by pathogenic agents. The method comprises a recombinant antibody protein fused to an intracellular anchor means, where the antibody is specific for a surface receptor of the cells necessary for pathogenic infection. The anchor means may be an endoplasmic reticulum retention peptide. The present sequence represents an endoplasmic reticulum retention peptide, which is used to produce antibody proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inhibiting, preventing or treating pathogenic infection of cells comprises expressing recombinant antibody specific for surface receptor of cells necessary for pathogenic infection, fused to intracellular

The compositions of the invention are useful for making cyclic peptides in vivo. Libraries of cells can be transformed with libraries of fusion nucleic acids. Intein-catalysed cyclic peptide libraries are useful for screening for an altered phenotype and identifying target molecules. The library is introduced into a cell, screened for an altered phenotype and target molecules that bind to the cyclic peptide are isolated. The method is useful for making cyclic peptides which retain biological activity, and for screening for cyclic peptides capable of altering the phenotype of a cell. The cyclic peptides are useful for altering cellular phenotypes and/or physiology, in screening assays to identify target molecules associated with changes in cellular phenotype or physiology and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   as drugs to treat a number of disease state, such as cancer, cardiovascular diseases, obesity and neurological disorders. The bioactive cyclic peptide is useful as the starting point for designing/synthesising derivative molecules with similar or more favourable properties for use as a drug and to pull out target molecules. By introducing random libraries into any tumour cell, peptides which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fusion polypeptide for generating libraries of cyclic peptides in vivo, comprises terminal intein motifs and a random peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Intein; intein-catalysed cyclic peptide library; cancer; tumour cell; cardiovascular disease; obesity; neurological disorder; apoptosis; cell death; cell division; cell growth; arrhythmia potential; cardiomycyte; heart failure; sarcolemmal calcium cycling; stroke; cell proliferation; atherosclerosis; metabolism; skin disorder; bone morphogenetic protein; endocrinology; infectious disease; viral infection; bacterial infection; diabetic ulcer; wound healing; keloid formation; skin connective tissue cell; antibiotic transport; drug resistance; cytostatic; anorectic; neuroprotective; cardiant; haemostatic; nuclear localisation signal; targeting signal;

growth can be identified and this method is useful in cancer applications. The methods are also useful in cardiovascular applications, constructions. The methods are also useful in cardiovascular applications, applications. The methods are also useful in cardiomyocytes, for constructile properties of cardiomyocytes and diminish heart cand sarcolemmal cardiomy corvers to prevent arrhythmias and sateriolemmal cardiomyocytes to prevent arrhythmias and sateriolemmal cardiomyocytes to prevent arrhythmias and senter that diminish embolic phenomena in arteries and arterioles and sateriolemmal cardiomyocytes to prevent arrhythmias cand saents that diminish embolic phenomena in arteries and arterioles of into these cell types and their proliferation in response to specific stimuli is monitored. Furthermore, the methods are also useful in screening for decreases in atherosclerosis, in screens to regulate controlling food intake mechanisms or reducing the responses of the receptor signalling pathways that regulate metabolism, in charchiology applications, to screen for agonists of bone morphogenetic operations in skin biology applications, endocrinology applications, confident infection, regulate of screen for cyclic peptides which block HIV-1 infection, regulation or inhibition of keloid formation and wound healing for diabetic ulcers. Condidate libraries are inserted into skin connective peptides which promote the growth of these cells are isolated. Further applications include screening for bloactive peptides which promote the growth of these cells are isolated. Further applications include screening for bloactive peptides which promote the growth of these cells are isolated. Improving the performance of existing or developmental drugs, and in the biotechnology. ABG99123-ABG99153 represent various targeting signals that the biotechnology. The invention relates to a process of expressing a recombinant protein in a plant and isolating the recombinant protein from the plant. The method comprises: (a) providing a plant, a plant derived tissue or cultured comparises (a) providing a plant, a plant derived tissue or cultured plant cells expressing a fusion protein (PP) including a recombinant protein and a cellulose binding peptide (CBP) being fused to it, FP being compartmentalized so as to be sequestered from the cell walls; (b) compartmentalized so as to be sequestered from the cell walls; (b) compartmentalized so as to be sequestered from the cell walls; (b) comperciate plant, plant derived tissue or cultured plant cells such complex; and (c) isolating the FP-CM complex. The recombinant protein complex; and (c) isolating the FP-CM complex. The recombinant protein complex; and (c) isolating the FP-CM complex. The recombinant protein complex is protein, in the manufacture of alcoholic beverages, for the hydrolysis of whey lactose, in the alcoholic beverages, for the hydrolysis of whey lactose, in the reduction of the arrilization and oxidation of plastics and rubbers, for the production of entimal feed enzymes, in the concesses, for production of animal feed enzymes, in the concesses, for production of protein fibers, for effluent treatment, in combination with detergents in cleaning applications, and consequence represents a endoplasmic reticulum retaining peptide
food industry, involves homogenizing a plant expressing fusion protein including recombinant protein and cellulose binding peptide being fused

```
The present sequence is a localisation signal sequence used in the construction of a fluorescent protein indicator. The indicator comprises a sensor polypeptide that is responsive to a chemical, biological, electrical or physiological parameter, and a fluorescence protein functional group. The sensor polypeptide is operatively inserted into the fluorescent moiety. The fluorescent indicator is useful for detecting the presence of a response inducing member in a sample. The method involves contacting the sample with the indicator and detecting a change in fluorescence, in which a change is indicative of the effect of the parameter on the sensor polypeptide. The novel fluorescent proteins are advantageous due to their reduced size as compared to the FRET (fluorescence resonance energy transfer) based sensors
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Patent No. 5854044

GENERAL INFORMATION:

APPLICANT: FitzGerald, David J.

TITLE OF INVENTION: Recombinant Pseudomonas Exotoxin with
TITLE OF INVENTION: Increased Activity

NUMBER OF SEQUENCES: 16

CORRESPONDENCE ADDRESS:

ADDRESSE: Townsend and Townsend and Crew LLP

STREET: Two Embarcadero Center, Eighth Floor

CITY: San Francisco

STARET: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            100.0%; Score 20; DB 1; Length 4; 100.0%; Pred. Sequence 9, Application US/08809668
Patent No. 5880895
GENERAL INFORMATION:
APPLICANT: Pastan, Ira
APPLICANT: Ruan, Chien-Tsun
TITLE OF INVENTION: Immunotoxin Containing a
TITLE OF INVENTION: Pseudomonas Exotoxin that Does No. 5980895 Require Proteolyti
TITLE OF INVENTION: Activation
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Righth Floor
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Patent No. 6083502
GENERAL INFORMATION:
APPLICANT: Chang, Kai
TITLE OF INVENTION: Mesothelin, a Differentiation Antigen
TITLE OF INVENTION: and Methods and Kits for Targeting the Antigen
TITLE OF INVENTION: and Methods and Kits for Targeting the Antigen
NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STRATE: California
                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                         ö

Patent No. 6074644

GENERAL INFORMATION:
APPLICANT: Pastan, Ira
APPLICANT: Ruan, Chien-Tsun
TITLE OF INVENTION: Disulfide-Stabilized Antibody Fragment Joined to a
TITLE OF INVENTION: Pseudomonas Exotoxin that Does No. 6074644 Require Proteolytic
TITLE OF INVENTION: Activation
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
CONNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                        Sequence 7, Application US/09215035
Patent No. 6153430
GENERAL INFORMATION:
APPLICANT: Pastan, Ira
APPLICANT: Chang, Kai
TITLE OF INVENTION: Mesothelin, a Differentiation Antigen
TITLE OF INVENTION: Present on Mesothelium, Mesotheliomas and Ovarian Cancers
TITLE OF INVENTION: and Methods and Kits for Targeting the Antigen
                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Sequence 49, Application US/08818252B

Patent No. 6197928

GENERAL INPORMATION:
APPLICANT: Taien, Roger Y.
APPLICANT: Miyawaki, Atsushi,
TITLE OF INVENTION: FLUORESCENT PROTEIN SENSORS FOR
TITLE OF INVENTION: DETECTION OF ANALYTES
TITLE OF INVENTION: DATE: 1997-03-14

CURRENT APPLICATION NUMBER: US/08/818,252B

CURRENT FILING DATE: 1997-03-14

NUMBER OF SEQ ID NOS: 56

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 20; DB 2; L 100.0%; Pred. ; Sequence 30, Application US/09157748
; Patent No. US20010003042A1
; GENERAL INFORMATION:
    TITLE OF INVENTION: Multiparameter FACS Assays to Detect Alterations in TITLE OF INVENTION: Call Cycle Regulation
    TITLE OF INVENTION: Call Cycle Regulation
    TITLE OF INVENTION: US/09/157,748
; CURRENT APPLICATION NUMBER: US/09/157,748
; CURRENT FILING DATE: 1988-09-21
; SOFTWARR: PatentIn Ver. 2.0
